Nikhil Patel

Software Developer

💼 Employment History

Associate Application Developer at Automatic Data Processing, Parsippany

June 2019 — Present

- Contributed reusable services to core frameworks for metadata-driven software platforms. (S3 object storage functions, Custom components)
- Created payroll software solutions to drive user experience, and design on ADP's latest payroll engine PI.
- Effectively implemented software changes and alterations based on specific design specifications.
- Tech refreshed EJB applications into hibernate micro-services, refreshed JSP applications into React, and placed them in containers on AWS.
- Collaborated as a part of an Agile-Scrum team to deliver user stories in a timely manner at the end of two-week iterations.
- Programming Languages: JavaScript, Java, SASS, HTML, CSS.

Software Developer Internship at OSI Laser Diode, Edison

May 2017 — August 2017

- Created a graphical user interface program to manage high level employee job functions and personal data with a built in audit report generator.
- Programming Languages: Python, SQL.

🎓 Education

Bachelor of Science, New Jersey Institute of Technology, Newark

September 2014 — May 2019

- Majors in Computer Science and Engineering Technology.
- Dual Bachelor degree, graduated Cum Laude with Bachelor in Science and Bachelor in Engineering.

📊 Senior Project

UrRecalls - Project Manager

February 2019 — May 2019

- UrRecalls is an app where users can search or scan products to get recall information on foods, drugs, electronics, and vehicles.
- My Role as the Project Manager allowed me to organize the tasks and create a framework to effectively deliver the project requirements.
- Jump-started the team by creating the Django back-end services, and assisted in the React Native front-end.
- Led the team to 3rd place, in the competition.
